## PROFESSIONAL PROFILE

Final-year Supply Chain Management student at the Arab Academy for Science, Technology & Maritime Transport (AASTMT), operating at the intersection of logistics and technology. Pairs direct field exposure to sea and air port operations with self-taught, applied capability in data analysis, software development, and cybersecurity — evidenced by a verified Hack The Box high ranking. Has independently designed and shipped multiple working digital products, from offline-capable mobile applications to cross-platform trading tools and 3D operational visualisation systems. Combines operational understanding of how goods actually move with the technical skill to instrument, analyse, and secure the systems that move them.

## CORE COMPETENCIES

|                               |                               |                                 |
|-------------------------------|-------------------------------|---------------------------------|
| ▸ Supply Chain Operations     | ▸ Data Analysis & Reporting   | ▸ Cybersecurity Fundamentals    |
| ▸ Port & Warehouse Logistics  | ▸ Advanced Excel Modelling    | ▸ Penetration Testing (Ethical) |
| ▸ Inbound-to-Receipt Tracking | ▸ Process & Workflow Analysis | ▸ Web & Application Development |
| ▸ E-Commerce Operations       | ▸ Dashboard & KPI Reporting   | ▸ Network & Systems Security    |

## EDUCATION

B.Sc. Supply Chain Management

College of International Transport & Logistics — Arab Academy for Science, Technology & Maritime Transport (AASTMT)

Cairo, Egypt · Expected Graduation: 2027

## PROFESSIONAL EXPERIENCE

## E-Commerce Operator — Cross-Border Digital Retail

*Independent* · *Egypt, Saudi Arabia & UAE markets* · **DROPSHIPPING**

- Launched and operated Shopify storefronts serving three separate national markets, handling product selection, store architecture, supplier coordination and order fulfilment end to end.
- Designed conversion-focused advertising landing pages for individual products, owning the full creative-to-checkout funnel.
- Managed cross-border logistics considerations including supplier lead times, shipping routes and delivery expectations across the GCC and Egyptian markets.

**Stack:** Shopify · landing-page design · paid-ad creative · cross-border fulfilment

## Logistics Field Study — Port & Warehouse Operations

*Sea & Air Port Facilities* · *Egypt* · Self-directed field work

- Conducted on-site observation at maritime and air cargo terminals, documenting transport movement and cargo handling procedures in live operating environments.
- Traced the complete inbound product journey — from vessel/aircraft arrival and offloading through customs handling to final consignee receipt — building a practical model of end-to-end logistics flow.
- Studied warehouse throughput and goods-receipt verification processes, connecting textbook supply chain theory to observed operational reality.

## TECHNICAL PROJECTS

### Offline Mesh Messaging Application

*Independent build*

- Architected and built a mobile messaging application that operates entirely without internet connectivity, enabling communication where network infrastructure is unavailable or compromised.
- Designed the roadmap for offline voice calling as network density increases with adoption.

**Stack:** Flutter · BLE / Wi-Fi Direct mesh networking · end-to-end encryption

### Cross-Exchange Cryptocurrency Arbitrage System

*Independent build*

- Developed a trading application designed to identify and exploit price differentials for the same asset across multiple exchange platforms.
- Required real-time multi-source data ingestion, comparison logic and latency-aware execution design.

**Stack:** Exchange APIs · real-time data comparison · automated execution logic

## 3D INTERACTIVE LOGISTICS VISUALISATION PLATFORM

*Independent build*

- Designed and produced web experiences that render complex logistics and supply chain operations as interactive **3D** environments, making abstract process flows immediately legible.
- Applied supply chain domain knowledge directly to information design — translating operational sequences into **VISUAL** narrative.

**Stack:** Web 3D rendering · interactive front-end · information design

Independent build

- Built a platform and underlying system connecting entrepreneurs, unconventional business concepts and sources of capital to accelerate new venture formation.

Stack: Full-stack platform architecture · matching logic

TECHNICAL CREDENTIALS

Hack The Box (HTB) [~] \$ Level 61

- Ranking earned through sustained, hands-on machine exploitation and security problem-solving on an independently verifiable platform — demonstrating applied offensive-security capability rather than theoretical familiarity.
- Practice conducted exclusively within controlled, authorised training environments.

TECHNICAL SKILLS

|                          |                                                                                                   |
|--------------------------|---------------------------------------------------------------------------------------------------|
| Programming & Automation | Python, C++ (working proficiency) · AI-assisted development workflows · scripting & automation    |
| Data & Analytics         | Microsoft Excel (formulas, pivot tables, charts) · data cleaning, analysis & structured reporting |
| Logistics & Supply Chain | Port and warehouse operations flow · shipment tracking · inventory & receipt verification         |
| Cybersecurity            | Ethical hacking · penetration testing methodology · vulnerability analysis · Hack The Box         |
| Digital & Commerce       | Shopify store architecture & management · landing-page design · web and mobile app prototyping    |
